

# JOURNAL OF AEROSPACE POWER

Published quarterly

by

**The Chinese Society of Aeronautics and Astronautics**

The Journal of Aerospace Power is a leading publication of its kind in China devoted to the advancement of the science and technology of aerospace power. It provides a common medium through which academic and industrial researchers and designers can communicate results, review progress and identify requirements for further work in this increasingly significant field.

The journal with roots deep in the fields of aerospace power has a nation-wide audience including scientists, R&D personnel, professors, engineers and technical officers.

Our primary goal is the dissemination of the technology related to aerospace power and the development of technical exchanges among the members of the aerospace community. Through the sharing of knowledge, we are able to make full use of the knowledge as well as stimulate new ideas and new technologies.

With this goodwill in view, it is our hope to further develop, in various ways, close ties with our counterparts abroad. The journal will serve as a medium introducing our technology and a channel exchanging knowledge.
